

Value Added Solutions to *Keep your Business Moving.*

When a major manufacturer of fine fragrances added bath and body products to their line, they were faced with staggering growth projections and a materials handling system not ready to meet the challenge. The company turned to WSi to engineer and implement a solution.

WSi application engineers worked with the customer and their consultant to design a system that utilized state-of-the-art product flow technology, including a new warehouse control system, weigh auditing, high speed sortation and photo-eye accumulation to improve efficiency and order accuracy.

A temporary pick, pack and ship line was installed while implementation of the new system was under way. This way, the customer had little

downtime as their operation was upgraded.

The solution proved successful. Distribution capability and plant capacity increased so significantly that the customer was able to close their remaining three distribution centers and roll their operations into the new facility. This resulted in significant cost savings at the operational level. At the same time order accuracy improvements exceeded 99%.

We at WSi Solutions are committed to exceeding your expectations and providing you with precisely the right solution to *Keep Your Business Moving.*
